

KMS Technologies

KMS new products

KMS-820 MT array system updates

LEMI-152 TRUE broadband MT coil:

- 0.00025 to 10kHz in ONE time series-no amplifier switching; no data bands
- Less equipment in the field - lower cost faster operation

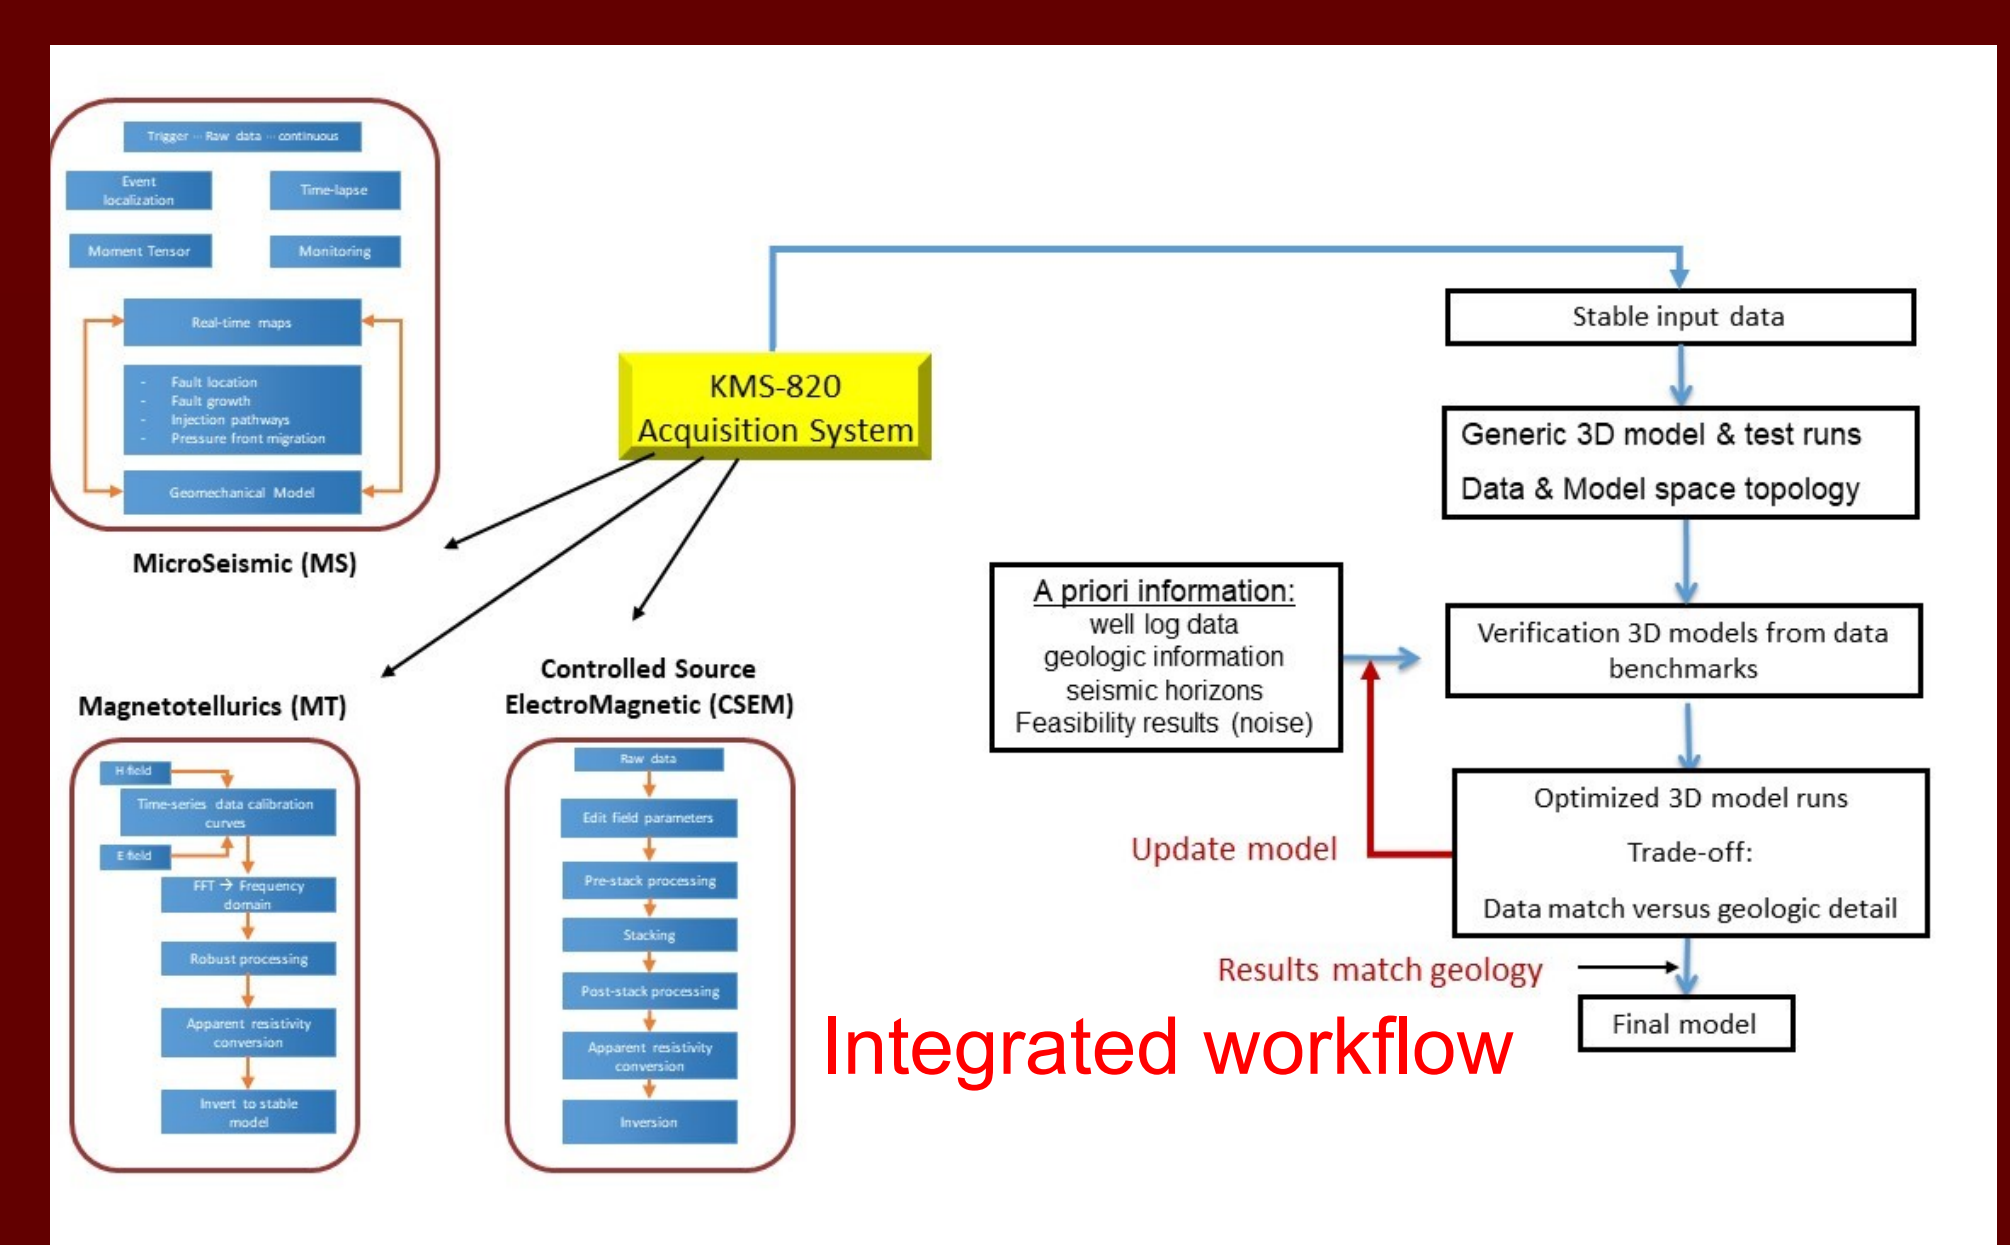

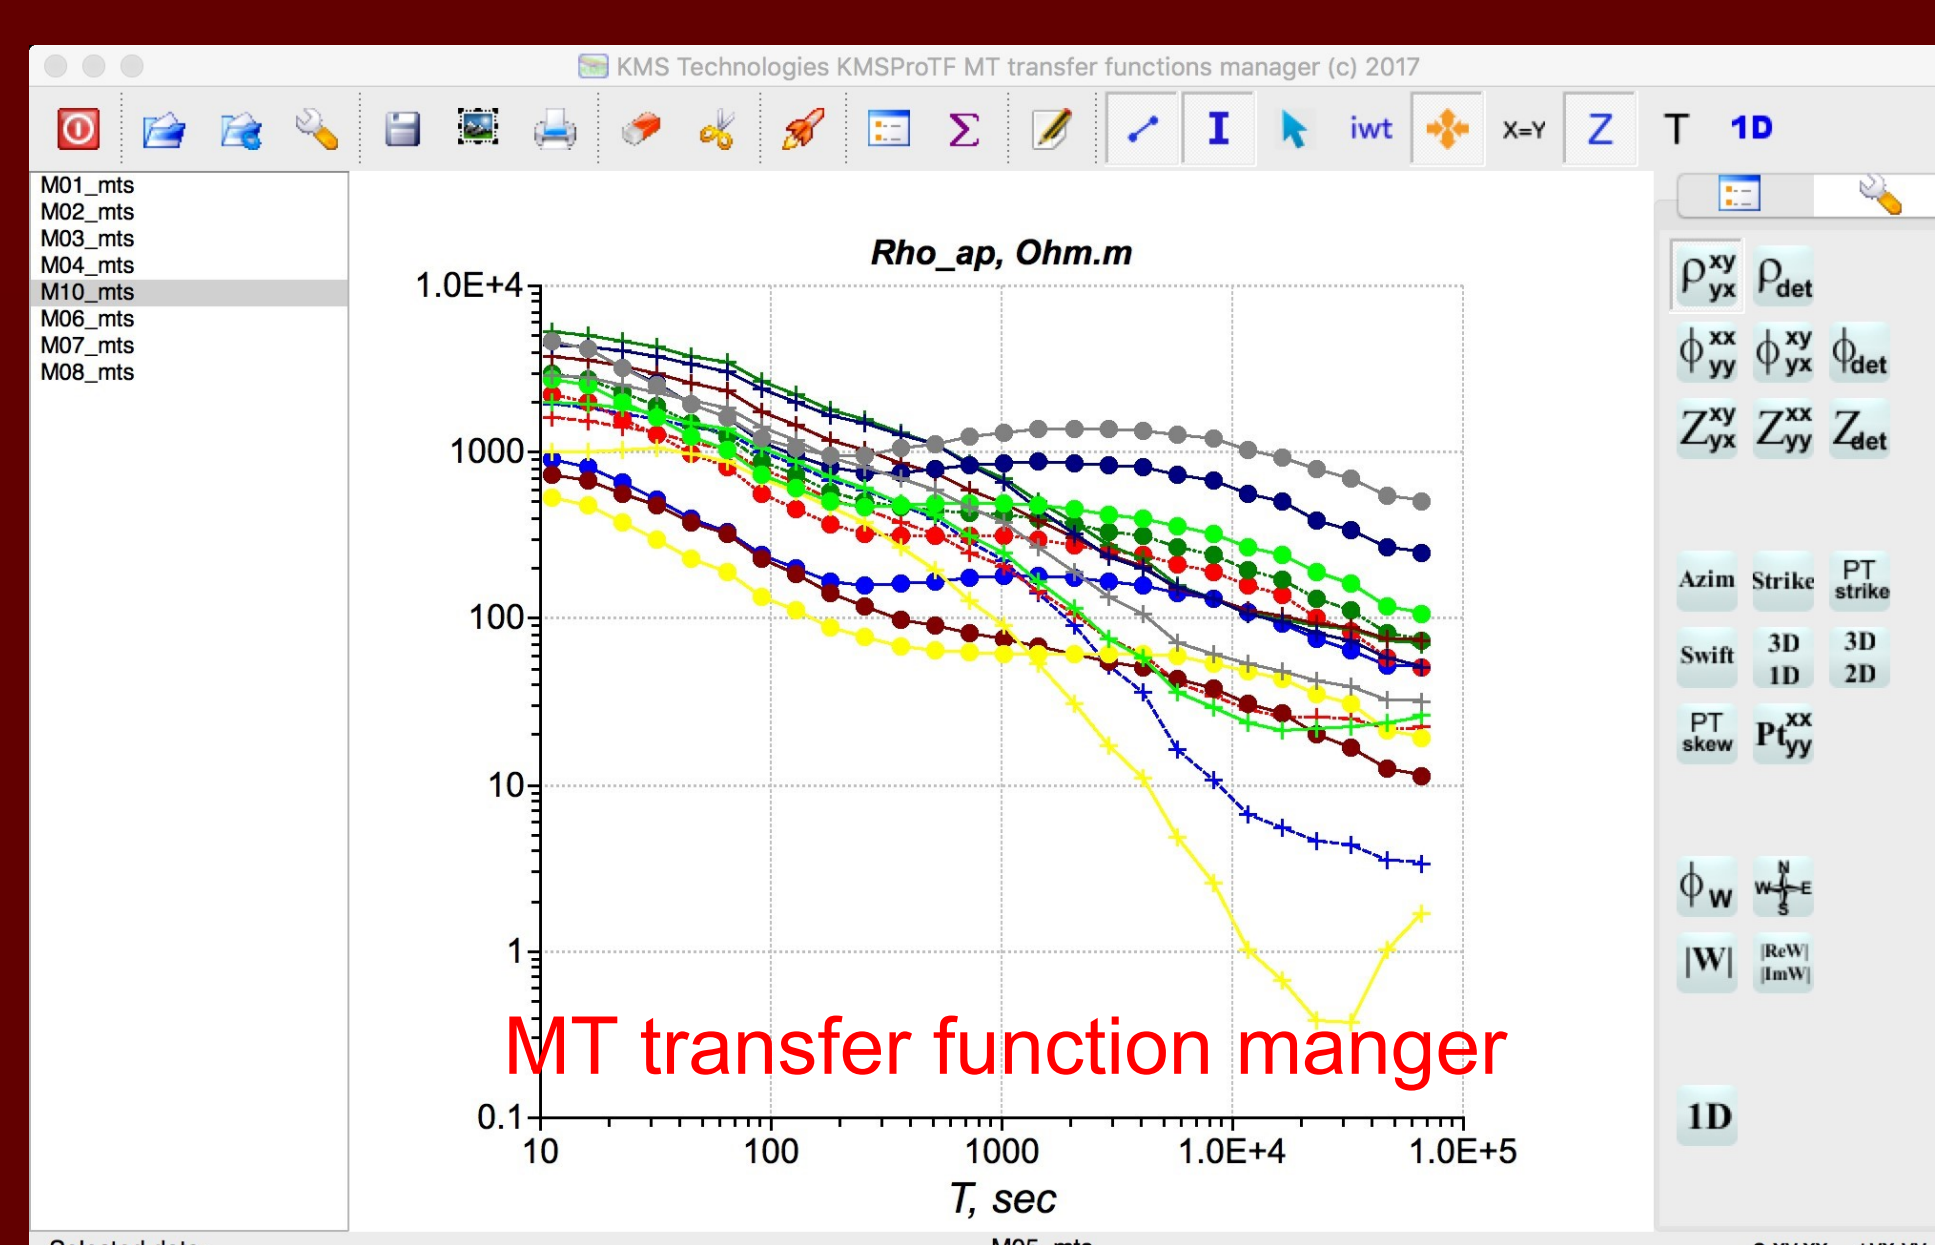

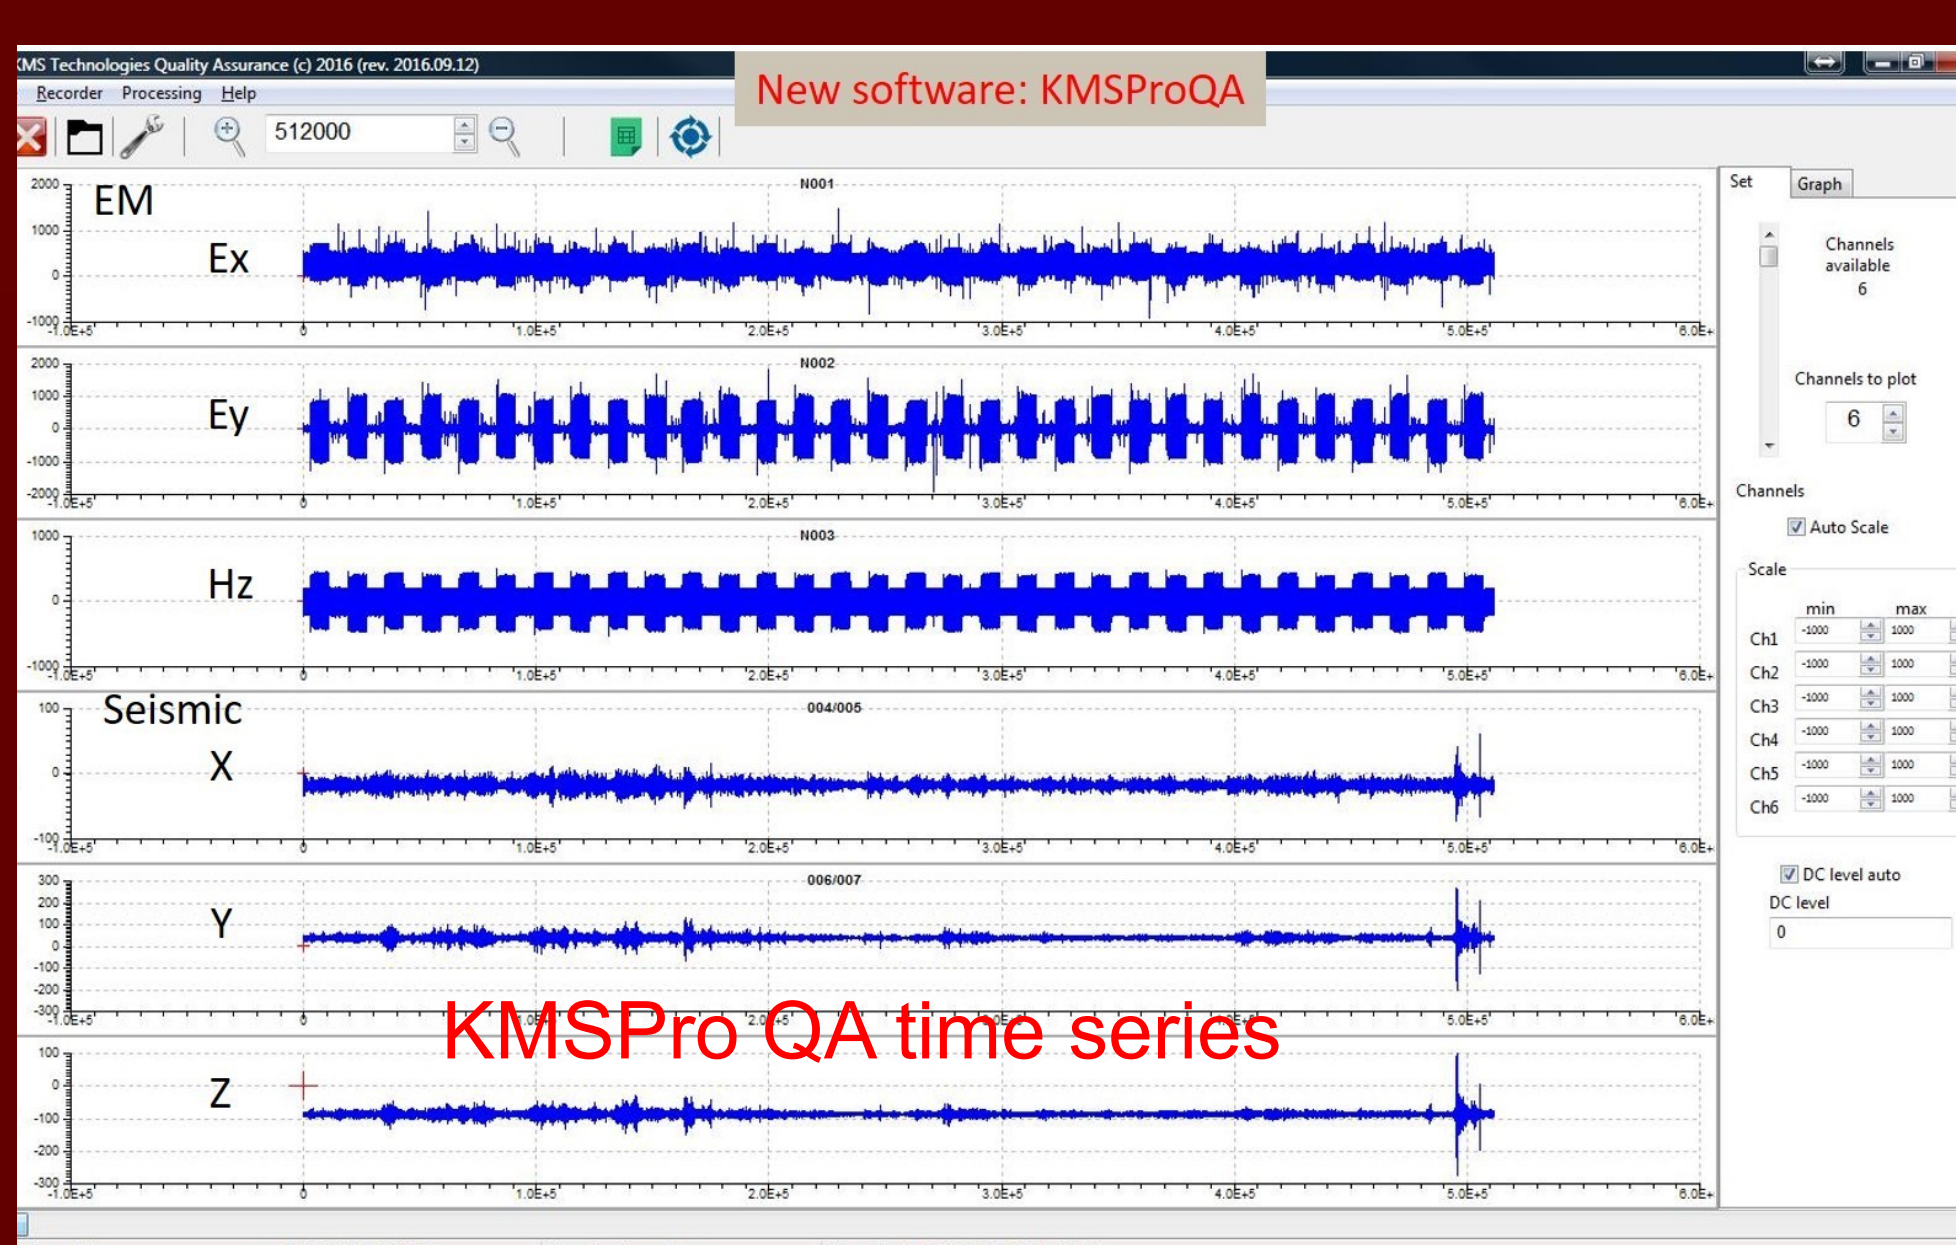

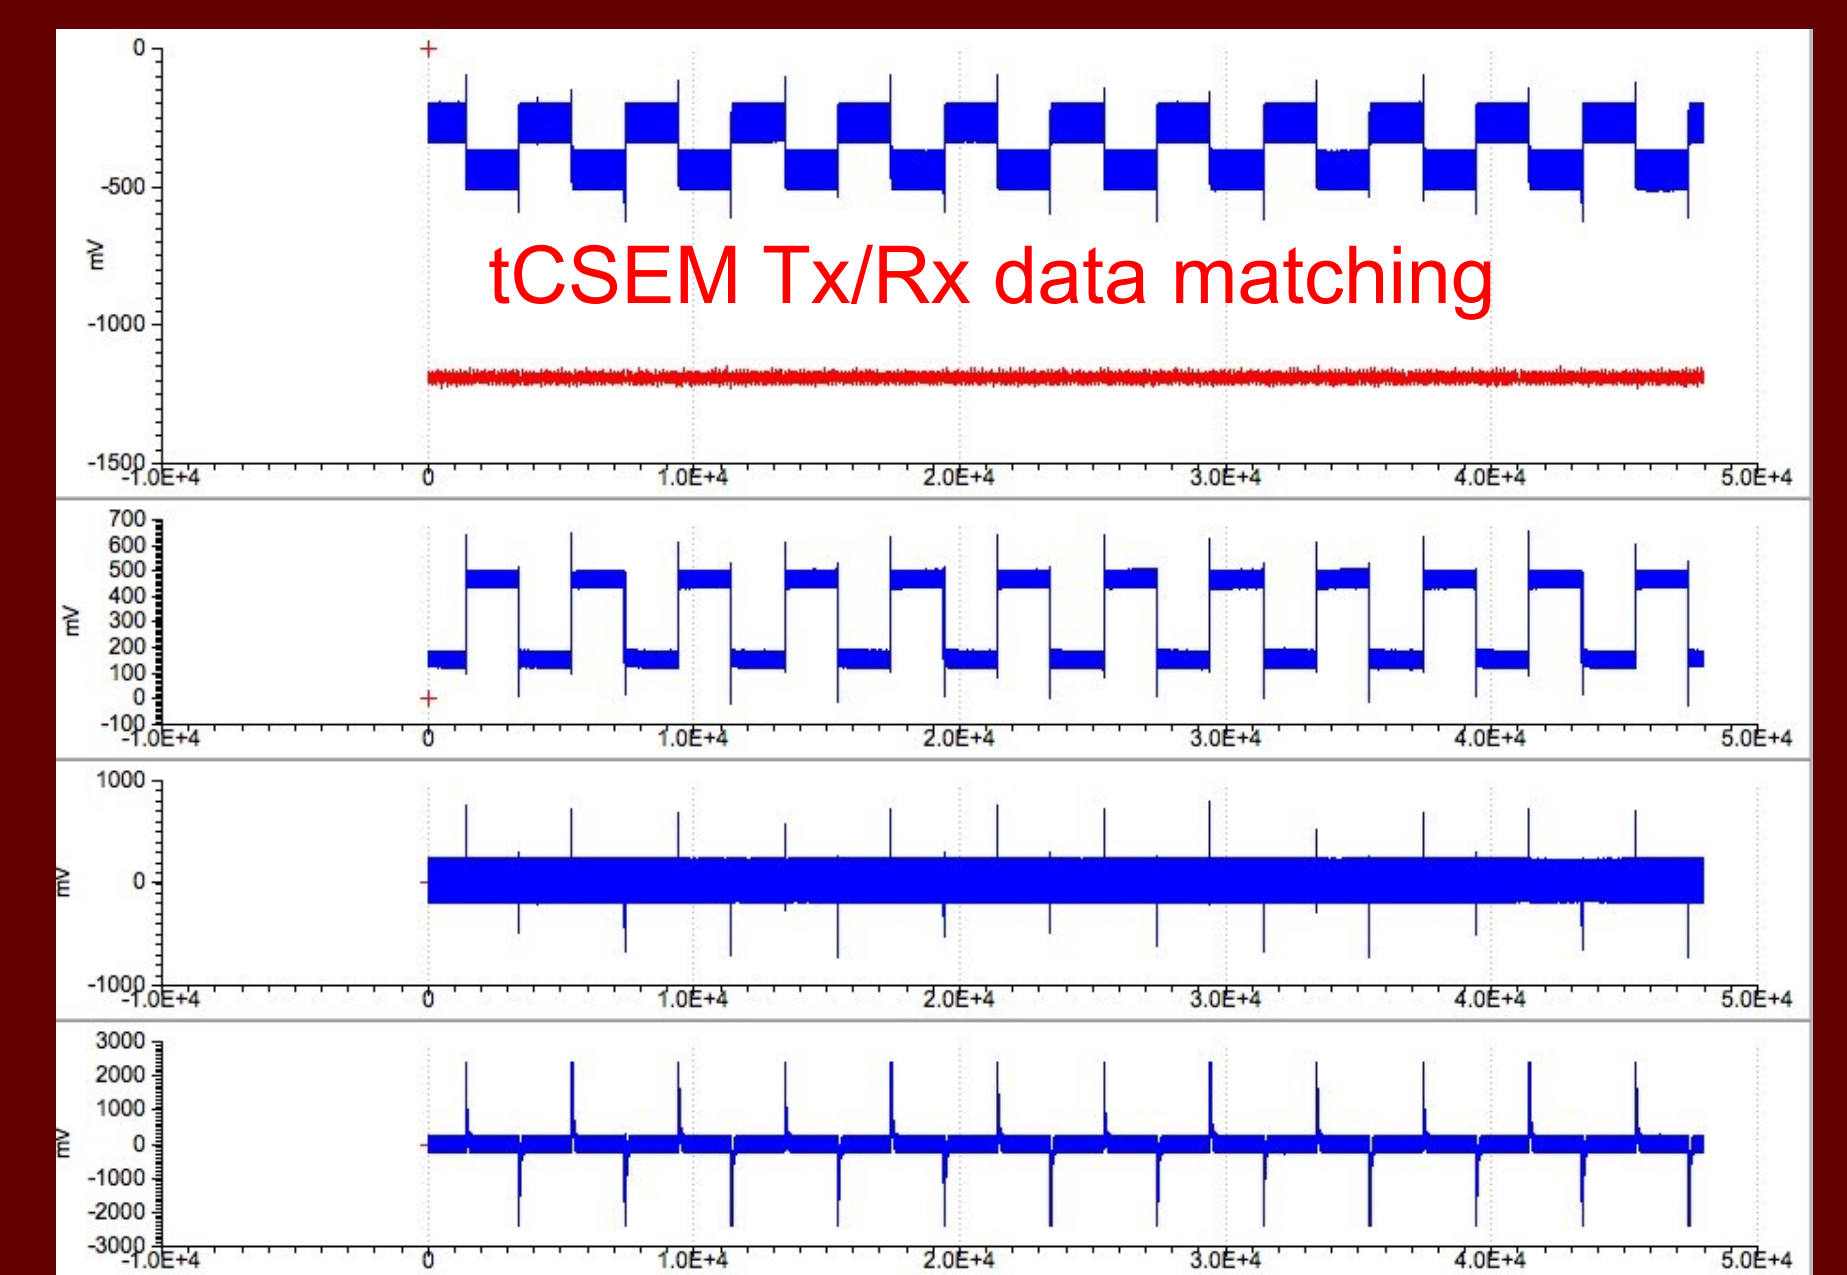

Low cost Mini-MT system and fit-for-purpose configurations:

Software updates:

- Acquisition scheduler for autonomous acquisition
- Two robust processing methods (Egbert and Smirnov)
- 1D inversion integrated
- Automated workflows
- 3D inversion license, services and use on KMS cluster available

CSEM updates

- 100 and 150 kVA transmitter
- Microseismic & EM in one system
- Lotem processing and inversion
- 3D modeling of all CSEM methods
- KMS-888 is 9 component seismic/EM borehole tool
- FSEM kit for KMS-888
- Fully integrated into KMS-820 array system

100 kVA land source

150 kVA transmitter

KMS-888 borehole tool
